COMING SOON: ICU DAY AND MEMBER APPRECIATION!

On **Thursday, October 17** we invite you to help us celebrate International Credit Union Day (ICU Day). This year FFCCU and 56,000 other credit unions are honoring the impact credit unions have on local communities across the world. We strive to bring financial empowerment to our community and give members a chance to take control of their financial future. To celebrate, we'll be hosting member appreciation day on October 17th. Come visit us in the branch for some special treats! Want a sneak peak of what we'll be offering? Follow us on Facebook at facebook.com/ffcommunity for updates!

THE GREAT PUMPKIN FEST IS BACK!

Take advantage of your member perks and get discount tickets for Cedar Point's HalloWeekends. It's going on each weekend now through October 27. There will be all your favorite fall activities, rides and attractions, live entertainment and more!

Visit us at ffcommunity.com/member-perks for details on ordering discount tickets.

DID YOU KNOW?...

A penny costs more to make than it's worth. It costs the government about 2.4 cents to make a single penny.

The U.S. picked the color green for American money because of its unique qualities. Green is most resistant to fading, flaking, and discoloration.

U.S. paper money is not paper at all: It's 75 percent cotton and 25 percent linen. In Ben Franklin's day, people repaired torn bills with a needle and thread.

DISSOLVING CANDY PUMPKIN

Be sure to ask a grown-up for help, this will get messy!

What You Need:

- Milk
- Water
- Oil
- Vinegar
- Candy Pumpkins or Candy Corn
- Glass Cups

Directions:

1. Fill 4 cups up with the same amount of liquid in each glass. Place the candy pumpkins in a bowl near the glasses for easy access.
2. Write down your prediction about what will happen to the candy pumpkins once placed into the different liquids.
3. Drop one candy in to each glass.
4. Wait 10–15 minutes before taking the pumpkins out of the glass.
5. Write down your observations and see if any of your predictions were right!

Try doing this experiment again and changing up the variables (time, shaking container, change liquid temperature, etc.). See if any drastic changes occur this time around!
